

Ripley's **Believe It or Not!**

EL TENIENTE,
A COPPER MINE
IN THE CHILEAN ANDES,
HAS OVER
1,500 MILES (2,400 KM)
OF TUNNELS!

A LUSH FOREST
SURVIVES IN
OMAN'S DHOFAR MOUNTAINS WITH NO RAIN!
THE CLOUD FOREST IS SURROUNDED BY DESERTS AND
GETS MOST OF ITS WATER FROM SEASONAL FOG.

RECYCLING
AN
ALUMINUM CAN
USES
APPROXIMATELY 4%
OF THE ENERGY
IT WOULD TAKE TO CREATE
A NEW ONE FROM RAW ORE,
CONSERVING ENOUGH ENERGY
TO OPERATE A TV FOR
ABOUT 3 HOURS!

< TASK > Answer the questions.

- (1) How long are the tunnels of El Teniente?

- (2) What makes a forest in Dhofar Mountains lush without rain?

- (3) Which needs more energy, recycling an aluminum can or creating a new one from raw ore?

Class _____ Student # _____ Name _____
